REALM ID

Build trust into every business process.

Realm ID helps organisations establish trusted digital identities and bring validated information into the systems and processes where business happens.

VALIDATE WHEN REQUIRED. REUSE WITH PERMISSION.

THE PROBLEM

The same information. Again and again.

Repeated information

Suppliers, customers and employees provide the same documents across multiple systems.

Disconnected data

Trusted information sits across ERP, CRM, finance and other business systems.

Fraud and impersonation

AI-powered fraud and increasingly sophisticated cyber threats make it harder to know who you can trust.

Slower, expensive processes

Manual checks and compliance processes create unnecessary friction and higher operational costs.

THE SOLUTION

Turn identity into reusable trust.

Establish a trusted digital identity, validate the information you need and securely reuse it across your business processes- without starting from zero every time.

KEY USE CASES

One trusted relationship. Multiple use cases.

Supplier onboarding

Establish supplier identity and validated company information.

Payment detail changes

Validate bank account information to reduce payment risk.

Customer onboarding

Reduce repeated collection of identity and business information.

Contracts and agreements

Connect trusted identity to the people and organisations participating in an agreement.

BUSINESS OUTCOMES

- Faster onboarding
- Reduced fraud exposure
- Lower operational costs
- Stronger governance
